

MI MI KHAING LIN

Full-Stack Developer

PROFESSIONAL SUMMARY

Senior Web Developer with 2+ years of experience specializing in full-stack web development using PHP and Laravel. Proven ability to design and build scalable, high-performance web applications. Experienced in developing real-world business systems, including a Training Management System (TMS) and a Library Management System. Strong background in system architecture, clean coding practices, and performance optimization. Skilled in Object-Oriented Programming (OOP), SOLID principles, and modern design patterns such as MVC, Repository, and Service Layer. Experienced in RESTful API development and cloud deployment using DigitalOcean. Currently expanding expertise in the .NET ecosystem for enterprise-level web and API development.

EDUCATION

Bachelor of Computer Science
B.C.Sc (Computer Science)
2019 - 2025

FRONTEND

- HTML5
- CSS3
- JavaScript
- Bootstrap
- Tailwind CSS

BACKEND

- PHP
- Laravel
- C# (ASP.NET)
- RESTful APIs
- Authentication (JWT, Sanctum)
- Validation & Middleware

WORKING EXPERIENCE

ITVisionHub Company Limited (Full Stack Developer)

- Engineered scalable web applications using PHP, Laravel, React.js, ASP.NET, and Livewire with a focus on performance, maintainability, and clean architecture
- Designed and developed RESTful APIs to support modular and scalable system integrations
- Implemented secure authentication and authorization mechanisms using Firebase, JWT, and role-based access control (RBAC)
- Optimized MySQL database performance through query tuning, indexing, and schema refinement
- Built responsive and user-friendly interfaces using modern frontend technologies
- Streamlined deployment workflows by implementing CI/CD pipelines using Git and GitHub
- Containerized applications using Docker to ensure consistent development and production environments
- Conducted code reviews and mentored junior developers, improving code quality and team productivity

DATABASE

- MySQL (Advanced)
- MSSQL (Basic)

DEVOPS & TOOLS

- Digital Ocean (Deployment & Server Management)
- GitHub
- VsCode
- Postman
- Figma

HOSTING & CLOUD

- Docker
- GitHub Pages

SOFT SKILLS

- Strong Communication
- Negotiation Skills
- Problem-Solving
- Strong Time management
- Resilient Under pressure and deadlines
- Good analytical and critical thinking skills

LANGUAGE

- Burmese (Native Language)
- English (conversational)

PROJECT SUMMARY

Training Management System (TMS)

Description:

This system is a software platform that helps organizations manage their entire training lifecycle - from course planning, scheduling, instructor assignment, student registration, attendance, assessment, and reporting. I implemented this project using N-tier architecture pattern.

Technologies : HTML5, CSS3, JavaScript, Bootstrap, Tailwind CSS, PHP, Laravel, MySQL, Docker, GitHub.

Key Features:

- Training course and schedule management
- User enrollment and tracking
- Progress monitoring and reporting
- Admin dashboard for management

Key Contributions:

- Designed system architecture using MVC pattern
 - Built scalable backend modules and APIs
 - Optimized database performance for large datasets
-

Library Management System (LMS)

Description:

This system is a software platform designed to manage and automate the daily operations of a library. It enables efficient handling of book cataloging, member management, borrowing, and returning processes. I implemented this project using an N-tier architecture pattern.

Technologies: HTML5, CSS3, JavaScript, Bootstrap, Tailwind CSS, PHP, MySQL, Docker, GitHub.

Key Features:

- Book catalog management
- Member registration and management
- Book issuing and return tracking
- Search and filtering system for books
- Admin dashboard for overall system control

Key Contributions:

- Designed system architecture using the MVC pattern
 - Implemented an efficient database schema for large book inventories
 - Optimized query performance for faster search and retrieval
 - Built responsive and user-friendly interfaces
-

Employee Management System

Description:

This system is a software platform designed to streamline and automate employee-related processes within an organization. It manages employee records, payroll, leave applications, and performance tracking. The system was developed using ASP.NET with the MVC pattern.

Technologies: HTML5, CSS3, JavaScript, Bootstrap, ASP.NET, MySQL, Docker, GitHub.

Key Features:

- Employee information and profile management
- Leave management system
- Role-based access control
- Admin dashboard for HR and management

Key Contributions:

- Developed secure and scalable backend modules using C# and Entity Framework
